The estimated percentage changes in employment in retail stores from February, 1937, to February, 1938 (the latest month for which figures are available for all States) are:—New South Wales, + 4.8; Victoria, + 1.5; Queensland, —; South Australia, + 0.9; Western Australia, + 1.8; Tasmania, + 1.6; Australia, + 2.4 (or, taking account of the growth of employee population, + 1.7).

NEW SOUTH WALES: EMPLOYMENT AND UNEMPLOYMENT.

The following table, compiled by the Government Statistician of New South Wales from Census data, the returns of private employers accompanying remittances of wages tax, and returns of Government employment, gives the best measure available of the course of total employment and unemployment in New South Wales.

		Percentage of	all who are dependen	t on and available for	employment—

(a) Adjusted to exclude casual seasonal assistants in retail stores

NOTES.

1. The index of employment is the ratio of the number in employment to the estimated number of wage earners available for employment. The index of unemployment is the residue, but both indexes are derived by modifying the Census ratios in accordance with subsequent changes.

subsequent changes.

2. "Number in employment" is virtually a direct record; "number of available wage earners" is an estimate derived by increasing the total wage earners in employment (plus unemployed) at the Census of 1933 in ratio to the annual increase in persons aged 15 to 64 years. In order to increase the degree of precision in the index, adjustment has now been made in the number of available wage earners thus estimated to allow for (a) increase in the proportion of females who are wage earners, (b) youths who—according to details recently made available—were without occupation but were not recorded in the wage-earning group at the Census of 1933. Adjustment for seasonal variations in employment is not made.

3. At the Census of 1933, 15,142 persons, or 1.8 per cent. of total dependent on employment, were unemployed by reason of illness,

3. At the Census of 1933, 15,142 persons, or 1.8 per cent. of total dependent on employment, were unemployed by reason of illness, accident, &c., or voluntarily. These are excluded from the above indexes, which relate to percentages of available wage earners employed and unemployed.

4. The percentages of unemployment shown above are approximations relating to all wage earners of both sexes. Separate estimates for males and females cannot be made from the data available. It is known, however, that there is relatively little unemployment among females; unemployment among males is probably between 1 per cent. and 1.5 per cent. greater than the ratio shown above for both sexes combined.

QUEENSLAND: EMPLOYMENT AND UNEMPLOYMENT.

The following table, compiled by the Queensland Bureau of Industry from the amount of contributions to the Unemployment Insurance Scheme, wages paid from the Unemployment Relief Fund, and other records, gives the best measure available of total adult male employment in Queensland.

MEN WAGE AND SALARY EARNERS.

	Pe	rcentage of all who are	dependent on employm	nent.
Three months ended—		e equivalent of relief with employed.		ttent Relief Workers " employed.
	Employed.	Unemployed.	Employed.	Unemployed.
1933—June	79.0 85.0 89.9 91.8	21.0 15.0 10.1 8.2	72.9 80.2 85.2 86.4	27.1 19.8 14.8 13.6
1936— November December	92.0 91.9	8.0 8.1	88.3 88.1	11.7
January February March April May June July August September October November December	92.7 91.8 91.4 93.6 94.0 94.3 94.5 94.9 95.0 95.2 95.2	7.3 8.2 8.6 6.4 6.0 5.7 5.5 5.1 5.0 4.8 4.8	88.8 87.8 87.8 90.0 90.3 90.5 90.7 91.2 91.4 91.5 91.7	11.2 12.2 12.2 10.0 9.7 9.5 9.3 8.8 8.6 8.5 8.3 8.1
1938— January	95.4	4.6	91.8	8.2

NOTES.

^{1.} The measurement is in terms of "full-time" employment, including its equivalent in "rationed" employment.

^{2.} Normal seasonal variations are not recorded, the figures showing the trend apart from such changes.

^{3.} The indexes have been adjusted to allow for the estimated increase in the number of men dependent on employment.

TRADE UNION UNEMPLOYMENT RETURNS.

The only regular records of unemployment available in comparable form over a considerable period are the quarterly percentages reported by trade unions to the Commonwealth Statistician. The membership of the reporting unions consists predominantly of males, and represents at present about 54 per cent. of the total trade union membership and about 20 per cent. of all wage and salary earners.

The percentages stated for New South Wales and Queensland differ from those given on previous pages partly because of differences in the field of employment covered, and partly because the trade union returns relate only to the position as it is known to the unions.

INDUSTRIAL GROUPS: CHANGE FROM AUGUST TO NOVEMBER, 1937.

Manufacturing—I. Wood, furniture, &c., 5.5% to 4.3%; II. Engineering, metal works, &c., 5.4% to 5.5%; III. Food, drink and tobacco, &c., 20.0% to 15.7%; IV. Clothing, hats, boots, &c., 12.5% to 10.3%; V. Books, printing, &c., 4.1% to 3.4%; VI. Other Manufacturing, 8.6% to 8.4%; VII. Building, 9.1% to 7.4%; VIII. Mining, quarrying, &c., 13.2% to 13.6%; X. Land Transport, other than railway and tramway services, 12.6% to 11.6%; IX., XII., XIII. and XIV. Other and Miscellaneous, 8.0% to 7.0%; All Groups, 9.3% to 8.2%.

BALANCE OF OVERSEA TRADE.

In the following table the oversea trade of the Commonwealth in physical commodities has been set out in a form which distinguishes between the ordinary trade in commodities other than gold, those movements of gold which may be regarded as resulting from current Australian production, and those movements of gold which cannot be attributed to the fact that Australia is a gold-producing country. The balance of trade on "current" account (that is, including credits from gold produced rather than gold exported) is given in columns D and E. The total balance of trade, as officially recorded, is given by the total of columns D and F.

Out of the credits mentioned above, together with those accruing from other "invisible" sources and existing balances of "oversea funds", Australia has to provide for various recurrent charges incurred overseas, and some payments of a capital nature. Chief among the former are the oversea interest commitments of the Australian Governments and other public bodies, which for the present trade year are estimated at approximately £22,000,000 sterling.

£'000 Sterling.

EXPORT PRICES AND EXPORT PRICE INDEX.

The following table shows the course of prices of seven of the more important Australian export commodities. The quotations are for units of standard grade, and hence do not reflect variations in the grades or qualities of the goods actually exported in each month. Index-numbers of the average level of export prices are included. They are compiled from the prices of 20 commodities, which constitute at present about 85 per cent, of all exports.

EXPORT PRICE INDEX (CHANGING BASE).

In computing the monthly index-numbers given on the previous page, the prices are multiplied by the average quantities exported during a fairly recent and representative period. Hence, while they indicate satisfactorily the general trend of the market, they take no account of the relative quantities actually sold at the different prices ruling during each month. In consequence the index-numbers do not give an adequate indication of the significance of the price movements as they actually affected current sales. This is shown more accurately by the index-numbers in the following table, in the computation of which the "quantity-multipliers" are changed each month. The index-numbers are designed solely for comparisons of current prices with those of the corresponding months, or periods of months, of the preceding year.

Base: Weighted Average Price Level in corresponding months of preceding year = 1,000.

Month.					Month same mo	Period of trade year ending in month stated compared with same period of preceding year.

WHOLESALE PRICE INDEX.

BASIC MATERIALS AND FOODSTUFFS.

This new index is intended to replace the old Melbourne Index of General Wholesale Prices. Its construction has been made possible by the collection of new data on prices and consumption. Both the contents and the method of computation have been altered. The price quotations have in the main been obtained directly from manufacturers and dealers, and, with a few important exceptions, from Melbourne sources. Apart from home-produced building materials, coal and one or, two minor commodities, however, the price movements may be taken as representative of fluctuations in wholesale prices in most Australian markets. The weighting system adopted is based on average annual consumption during the years 1928–29 to 1934–35 inclusive.

(Base: 1928-29=1,000.)

PRIMARY PRODUCTION PRICE INDEXES.

The annual index-numbers in the following table have been recomputed to the base 1928–29 = 1,000 from the revised series recently published in *Production Bulletin* No. 30. They are based in general on prices realized in the principal markets of the Commonwealth.

The monthly index-numbers (based on the nearest equivalent wholesale quotations) are intended progressively to forecast the point which the annual index-numbers will eventually reach, and to provide a preliminary figure for the latest full year pending the completion of the annual census of production. The preliminary index-numbers will be revised as each production census is completed.

RETAIL PRICE AND WAGE-RATE INDEXES.

In the tables on this and the following page the index-numbers have been recomputed uniformly to the base 1928-29=1,000 in order to facilitate comparisons with other data. The absolute heights of the index-numbers differ, in consequence, from those published elsewhere.

(Base: 1928-29 = 1,000.)

⁽a) Weighted average Six Capitals or Six States 1928–29 = 1,000. (b) Payable as from 1st March. (c) Payable as from 1st June. (d) Payable as from first pay-period in July. These rates are the rates based on the March quarter index-numbers plus the first instalments of the "prosperity loadings". (e) Payable as from 1st September. Rates based on June quarter index-numbers plus the first instalments of the "prosperity loadings". (f) Payable as from 1st December. Rates based on June quarter index-numbers plus the full "prosperity loadings". (g) Payable as from 1st December. Rates based on September quarter index-numbers plus full "prosperity loadings". (h) None declared, but Federal rates followed to a large extent. (i) Payable as from 1st March, 1938. Rates based on December quarter, 1937, index numbers. (k) Payable as from 1st April.

SECURITY PRICE INDEXES: NEW SOUTH WALES.

In comparing movements in the three sets of index-numbers given below, attention should be paid to differences in the methods by which they have been constructed, and in the nature of the companies and the types of shares included in each index. These are outlined in the footnotes to the tables.

(Base: 1928-29 = 1,000.)

		New South Wales: Ordinary Shares.(a)

⁽a) Compiled by the New South Wales Government Statistician. The index-numbers are based on the prices of the ordinary shares of companies (excluding banking companies) whose business is conducted wholly or largely in New South Wales. They represent unweighted averages of the mean monthly prices per £ of paid-up capital. Adjustments are made where capital is written off or bonus shares issued. Recomputed from original base, par values.

⁽a) Compiled by the Stock Exchange of Melbourne. The index-numbers of ordinary shares are based on the prices of the shares of companies whose business is more or less national in character. They represent averages (weighted by paid-up capital, with adjustments in the case of bank shares) of the mean monthly prices on the Melbourne Stock Exchange. The preference share index-numbers are based on the reciprocals of average yields. Recomputed from original base, May, 1926. (b) Compiled by the Queensland Bureau of Industry. The index-numbers are based on the prices of the ordinary shares of 21 representative Queensland companies, and the preference shares of three companies whose ordinary shares are inactive. The index-numbers represent unweighted averages. End-of-month values were used until December, 1930, and mean monthly values thereafter. Recomputed from original base, April, 1928.

⁽a) Revised series, now based throughout on total production. (b) Includes all central generating stations. (c) The base for each month is the average sales in the corresponding months of the three years 1929 to 1931; i.e. seasonal variations are removed. Based on units of 3,412 B.T.U. (d) Estimated on the basis of production by the Electrolytic Zinc Company Ltd. (e) Subject to revision.

MAINLAND STATE RAILWAYS: FREIGHT, PASSENGERS AND REVENUE.

The following table shows statistics of freight and passengers carried and of revenue earned on the five Mainland State Railways, excluding particulars of the South Brisbane—Border Section of the Uniform Gauge Line which are not available monthly.

The daily average number of passenger journeys is obtained by dividing the monthly totals by the total

number of days in the month.

			Freight	Carried.	Passenger

MAINLAND RAILWAYS: FREIGHT TONNAGES CARRIED.

The following table shows statistics of freight tonnages carried by the Mainland State and Commonwealth Railways.

The daily averages for freight tonnages are obtained by dividing monthly tonnages by the number of days in the month, excluding Sundays, Xmas Day and Good Friday.

Freight totals are obtained by adding together the total freight tonnages carried on the Commonwealth and State Railways and deducting the sum of the interstate tonnages carried in New South Wales and South Australia. This avoids double-counting except to a negligible extent.

WHOLESALE TRADE.

Some indication of fluctuations in the value of wholesale trade is given by the returns made under the Sales Tax Acts, but care must be exercised in interpreting the figures. The returns do not relate to all wholesale trade, nor do they cover a constant proportion of all trade. The effects of legislative and administrative changes on the recorded values of taxable and exempt goods respectively are somewhat uncertain, although total recorded sales are affected in smaller degree by such changes. Insufficient information is available to enable adjustments to be made to the crude figures on this account. Except where such changes are indicated, the "preliminary" figures are fairly comparable with one another, but they are not directly comparable with the "final" figures.

An index of activity in New South Wales is afforded by monthly returns of the sales of 42 large factories.

⁽a) The Act came into operation on 18th August, 1930, the rate of tax being $2\frac{1}{2}$ per cent. It was raised to 6 per cent. on 11th July, 1931, reduced to 5 per cent. on 26th October, 1933, and to 4 per cent. on 11th September, 1936. With certain specified exemptions, all goods sold in Australia, including imports, are taxable. (b) "Final" figures. (c) "Preliminary" figures. (d) The list of exemptions was extended as from 11th July, 1931; 2nd September, 1932; 11th November, 1932; 27th October, 1933; 1st August, 1934; 13th December, 1934; 25th October, 1935; and 26th September, 1936.

RETAIL TRADE.

Statistics of retail sales are collected only in two States. In New South Wales the Retail Traders' Association Research Bureau, in co-operation with the Commonwealth Bank, collects returns from a number of large Sydney stores. In Queensland returns are collected by the Bureau of Industry from twelve large department stores in Brisbane and their branches in country towns. Because of the relatively rapid development of chain store business, it is uncertain to what extent the department store figures are representative of all retail trade.

(a) Includes Inscribed Deposit Stock of E.S. and A. and Queensland National Banks. (b) In computing the ratios the figures relating to the Rural Bank of New South Wales have been excluded. (c) Prior to 4th quarter of 1937, includes Short Term Loans, other than Treasury Bills, of the Commonwealth Bank.

BANK CLEARINGS.

In the absence of statistics of debits to customers' accounts, bank clearings form a useful index of the money-value of cheque payments. Since they do not include cheques deposited in the banks on which they are drawn, the figures are not exhaustive, and their comparability is sometimes impaired by the effects of banking amalgamations. Cheque clearings connected with the redemption or issue of Treasury Bills have been excluded from the following table, but adjustments have not been made for other sporadic transactions concerned with public finance.
